

SurgiPad™

SurgiPad™ is designed to complement the Specialist Practice Manager™ or Private Hospital Manager™ software from Incisive Medical Systems, by providing the clinical notes and bookings for the patients that are currently in your care.

The range of patients you select to be copied onto the PDA is determined by the number of weeks their booking is prior to or following today eg 1 week ahead - 4 weeks past

Works on any device using the Microsoft Windows Mobile operating system and with a screen resolution of 320x240

VIEW YOUR THEATRE & CLINIC LISTS

- Select past and future lists
- Booking details eg x-rays, funding, anaesthetic
- Time start and period allocated
- Patient alerts & allergies

DISPLAY PATIENT CLINICAL RECORDS

- Amazing clarity and readability
- Quick view or full screen
- Similar display format as SPM
- Scroll through patient's records

WRITE NEW NOTES OR REPORTS

- Use Handwriting recognition or keypad
- Insert your commonly repeated phrases
- Synchronise into main patient database

ACCESS CONTACT DETAILS

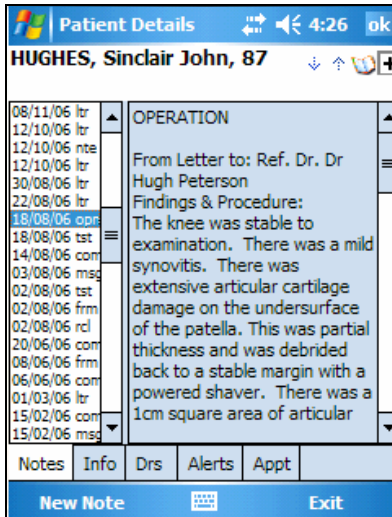

- Patient, Referring Dr, GP
- Addresses, Phone numbers
- Registration Comments
- Patient Alerts & Allergies

AUTO SYNCHRONISE DATA

- Automatically update data from Specialist Practice Manager™ & Private Hospital Manager™
- Connect using USB, Bluetooth or Wireless

USEFUL EVERYWHERE

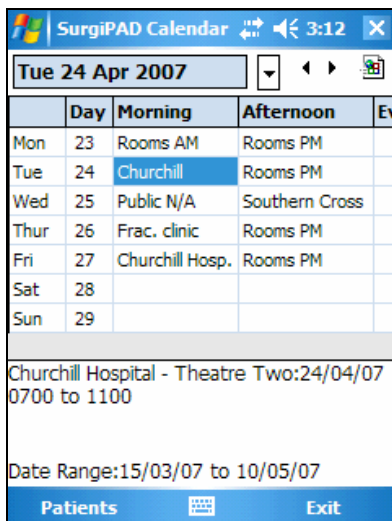

- Theatre
- Home
- Conferences
- Public Hospital
- Holiday

CLINICAL RECORDS

View your letters, notes or lab reports in the same format as displayed in Specialist Practice Manager™

Expand the selected record to display in the whole screen.

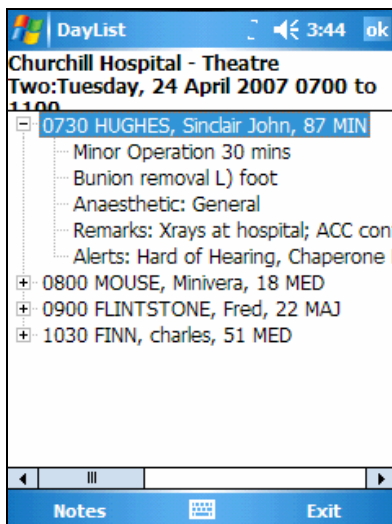

SESSIONS

View your operating and clinic schedules.

Drill down to list the patients and their booking details.

Session start/finish times and associated details are displayed.

BOOKINGS

List the patients for the selected session.

Expand to show the details relating to the patient's consultation or operation.

Link through to their demographic and clinical records.

REQUIREMENTS

SurgiPAD software will only function on devices using Microsoft Mobile 5.0 or 6.0. It will not operate on the 'Palm' operating system.

Memory required will be between 5 – 20 Mb depending on the number of patients selected and amount of data you choose to transfer.

A screen size of 320x240 pixels is generally required although it will resize to fit similar displays.
